

APA style feature	Scientific value or assumption
There are very few direct quotations of other researchers.	The phenomena and theories of psychology are objective and do not depend on the specific words a particular researcher used to describe them.
Criticisms are directed at other researchers' work but not at them personally.	The focus of scientific research is on drawing general conclusions about the world, not on the personalities of particular researchers.
There are many references and reference citations.	Scientific research is a large-scale collaboration among many researchers.
Empirical research reports are organized with specific sections in a fixed order.	There is an ideal approach to conducting empirical research in psychology (even if this ideal is not always achieved in actual research).
Researchers tend to "hedge" their conclusions, e.g., "The results <i>suggest</i> that..."	Scientific knowledge is tentative and always subject to revision based on new empirical results.
